

Electronic Cash Registers

SE-S300 | SE-S2000

Stylish cash registers with the flexibility to suit your specific business requirements

SE-S300MD

SE-S2000MD

Equipped with key features to meet all your business needs

SE-S300 | SE-S2000

Designed to meet the needs of almost any retailer in the grocery or general merchandising fields, our stroke keyboards are equipped with 25 department keys (1-sheet model) or 30 department keys (2-sheet model) for quick, accurate department registration. Using the shift key doubles these numbers to 50 or 60, respectively. And up to 200 departments can be registered by department number.

A post receipt function key lets operators issue receipts even with the receipt function key turned to OFF.

Stylish design

The contoured body with two tone colouring adds further richness and elegance to your store's image. The keyboard is operator friendly, and the display is set at the optimal angle for easy viewing. The key touch tones can also be turned off when a quiet store atmosphere is desirable.

High visibility sales transaction display

A clear backlit LCD assures easy operator readability. Transactions are displayed in up to 12 characters and individual sales figures in up to 10 digits in 7 segments.

Receipt and journal printers

The speedy thermal printers meets the needs of a busy environment with clear, concise printing on paper measuring 58mm in width. Enhance your store message with graphic images. You can print in normal or double-size characters and add a graphic logo and/or commercial message as a header.

Help

The Help function provides answers to frequently asked questions; from date/time programming and other receipt issuance issues to paper roll installation and operation of the 300 PLU/department name feature.

Graphic logo printing

Print graphic images and free text on your receipts for promotional or other purposes. Select an attractive text font to add style to your promotions. A selection of built-in images are also available for immediate use.

Quick, easy drop-in paper loading

The drop-in paper loading method is adopted to simplify paper roll replacement.

Bar Code Scanning

Up to 3,000 products can be sold using Bar Code Scanning enabling you to control your stock more effectively. In addition products can easily be added to the file either by direct/batch maintenance or scanned in "on the fly" using the "Not Found Feature".
